

Wonderlee

On-Bearing Fold Gate

No hinges ... super quiet and long lasting on bearing

Conventional fold gates on butt hinges are sticky and noisy because even the best welders would not be able to align all 3 hinges truly on site, causing metal to metal frictional self-destruction. Wonderlee proprietary *Gimbal Bearing System* allows slight top and bottom axial mis-alignment ensuring very smooth operation.

Maintenance free Hydraulic operator by FAAC Automation, Italy
Specifically designed for 2-leaved fold gate
Telescopic arm for linear movement
Anti-crushing by-pass valves for immediate reversal or stopping of the gate
IP-55 anodised monobloc construction
High performance for heavy gates
Manual release in the gate arm connector
Max gate wing length 4m
For door up to 800kg wing weight
Pedestrian mode 1-leaf opens
Car mode complete open
Auto close 0-180 seconds
