

Wonderlee On-Bearing Swing Gate

No hinges ... super quiet and long lasting on bearing

Conventional swing gates on butt hinges are sticky and noisy because even the best trained welders would not be able to align all 3 hinges truly on site, causing metal to metal frictional self-destruction. Wonderlee proprietary *Gimbal Bearing System* allows slight top and bottom axial mis-alignment resulting a very smooth operation.

Maintenance free underground operator by Aprimatic Automation, Italy
Service ability without removing the gate
Permanent lubrication
Water-proof motor

Stable electronic box with control plate
Additional gate support with ball bearings
High performance for heavy gates
Manual release in the gate arm connector
Max gate wing length 4m
For door up to 800kg wing weight
Pedestrian mode 1-leaf opens
Car mode complete open
Auto close 0-180 seconds
